

HireIQ

Rank candidates the way a great recruiter would.
Not by keywords — by understanding.

■ Semantic AI

■ Real Claude AI

■ Behavioral Signals

Data & AI Challenge

Deadline

July 2, 2026

Hiring Is Broken.

Keyword filters miss the best people.

Keyword Overload

Recruiters get 500+ applications. ATS filters by exact keywords, missing brilliant candidates who describe skills differently.

Time Wasted

Hours spent reading irrelevant profiles. 72% of recruiters say finding qualified candidates is their #1 challenge.

Wrong Hires

Keyword matching ignores career trajectory, behavioural signals, and growth potential — leading to costly mis-hires.

75%

of resumes never read by humans

6 sec

average recruiter review time

\$15K+

average cost of a bad hire

Introducing HireIQ

**"Rank candidates the way a great recruiter would —
not by matching keywords, but by actually understanding who fits."**

■ Semantic Understanding

Claude AI reads the full JD and understands the real requirements — skills, culture, seniority, growth stage.

■ Full Profile Analysis

Evaluates career trajectory, skills depth, platform activity (GitHub, OSS), education, and key achievements.

■ Intelligent Scoring

AI generates a 0-100 fit score per candidate with reasoning — not a black box, fully explainable.

■ Trusted Shortlist

Exports ranked CSV/JSON in the exact format required — ready to submit to any ATS or hiring team.

3 Steps to the Perfect Shortlist

Simple for recruiters. Powerful under the hood.

01

Input Job Description

Recruiter pastes any JD.
Claude AI semantically decodes requirements, culture fit, seniority, and must-haves vs nice-to-haves.

02

Load Candidate Pool

Upload CSV from the dataset or connect directly. System reads career history, skills, activity, education, and achievements.

03

AI Ranks & Explains

Claude AI scores each candidate 0-100 with behavioural signals and a 2-sentence reasoning. Export ranked CSV instantly.

Output Format →

How the AI Engine Works

What Makes HireIQ Different

Every feature is designed for real recruiter workflows — not demos.

■ Semantic Job Understanding

Goes beyond keyword extraction to understand seniority, culture fit, and implicit requirements using

■ Animated Score Rings

Visual 0-100 fit score with colour-coded rings (green=excellent, red=low) for instant visual triage.

■ Explainable AI Reasoning

Every ranking comes with a 2-sentence human-readable explanation — no black box, full transparency.

■ Dataset CSV Upload

Directly upload the Hack2Skill dataset CSV. System auto-maps columns and processes all candidates.

■ Offline Fallback Scoring

If API is unavailable, local heuristic scoring activates instantly — system always works during demos.

■ Export Ranked Output

One-click export to CSV and JSON in the exact submission format required by the challenge.

HireIQ in Action

Making Hiring Smarter

HireIQ vs Traditional ATS

Feature	Traditional ATS	HireIQ AI
Candidate Ranking	Keyword count	Semantic understanding
Career Trajectory	■ Ignored	■ Fully analysed
Behavioural Signals	■ Not considered	■ GitHub, OSS, activity
Explainability	■ Black box	■ 2-sentence reasoning
Speed	Hours of reading	< 30 seconds for 50 candidates
Output Format	Unstructured	■ Ranked CSV + JSON

Built With Modern AI Tools

Single-file deployment. Zero dependencies. Instant demo.

■ Claude AI API claude-sonnet-4-6

Core intelligence engine. Semantic ranking, behavioral analysis, explainable scoring.

■ HTML5 Semantic structure

Clean, accessible markup.
Single file — no build step needed.

■ CSS3 Aurora, glassmorphism

Animated orb background, holographic card borders, gradient typography.

■ JavaScript Vanilla ES6+

File parsing, API calls, typewriter effect, fallback scoring engine.

■ Netlify CDN Zero-config deployment

Drag-and-drop deploy. Global CDN.
Live URL in under 60 seconds.

■ GitHub Version control

Clean repo structure. Public.
Ready for judge review.

■ Project Structure

```
hireiq/  
  index.html      ← Complete app (HTML + CSS + JS + Claude AI)  
  HireIQ_Pitch_Deck.pdf ← This deck  
  hireiq_ranked.csv ← Ranked candidate output
```

Build Something Real.

"Every great hire starts with understanding,
not keyword matching." — HireIQ

Submission Checklist

■ GitHub Repository — Clean, complete, working code

■ PDF Pitch Deck — This document (approach + architecture)

■ Ranked Output CSV — Generated by HireIQ AI engine

■ Live Demo URL — Deployed on Netlify
